Advisor: Elaine Weltz

## The Problem:

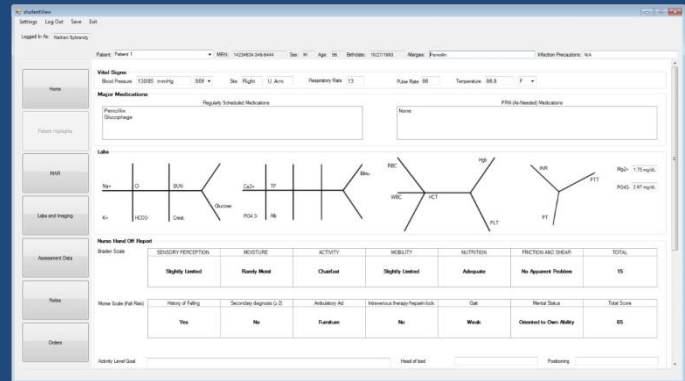

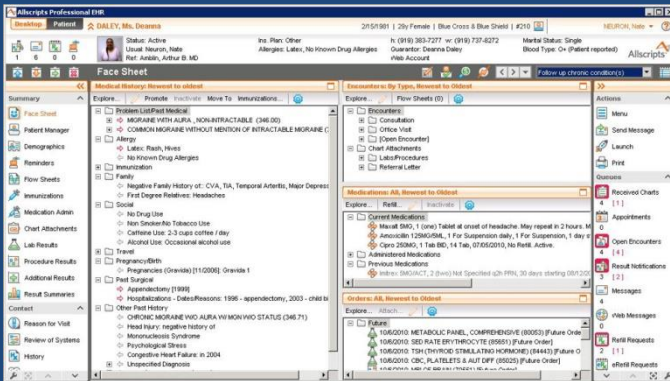

Nursing students at SPU do not have access to electronic medical records software outside of clinical settings. Additionally, existing training software for EMRs is exceedingly cost prohibitive. Upon entering the professional healthcare setting there is often a steep learning curve to effectively use the available records software.

## The Solution:

We are creating a medical records application for the Lydia Green Nursing Program that will allow students to gain experience working with EMRs. Simulation labs and other assignments will be enhanced by EMPRS to more accurately reflect real medical settings and prepare students for them.

A modern EMR interface:
